

## MAINTENANCE OILED FLOORING

### Important instructions :

- Product and ambient temperatures should be between 15°C and 35°C
- Ensure good ventilation at all times during application and drying period.
- Do not use microfiber cloths
- Do not dispose of impregnated cloths or discs in the garbage as they may self-ignite. Let dry in the open air.

### A. POST INSTALLATION MAINTENANCE

Frequency : immediately after installation

Product : **WOCA Maintenance Oil**

- Vacuum and clean the surface with a very slightly damp mop to remove all dust and dirt. Allow to dry thoroughly.
- If surface is very dirty with stubborn stains, use **WOCA Master Cleaner** (125 ml/5 liters of water) and let dry for 8 h before continuing (cfr. thorough cleaning)
- Apply the **WOCA Maintenance Oil** sparingly (bamboo is very dense and absorbs very little) with a brush, short nap roller or cloth. Remove excess oil with a cloth (do not use microfiber).
- For optimal result or for intensively used surfaces, It is recommended that the oil should be penetrated with white felt discs and Patinas (small, very slightly abrasive discs that require a circular polisher). Then polish with a black felt disc. Remove any excess with a white wool disc. Your professional installer may be able to take care of this step. They usually dispose of the necessary equipment.

### B. REGULAR CLEANING

Frequency : weekly

Product : **WOCA Natural Soap**. If you want to whiten your floor, use **WOCA Natural soap white**.

- Dilute the product in cold water at rate of 8.5cl (2 caps) for 5L.
- Whether you use a Spray Mop (cfr. Our accessories), mop or auto scrubber, always clean in the direction of the fibres.
- Do not leave water on the surface after cleaning. Dry well (no microfiber cloths).

### C. REFRESHING :

The purpose of refreshing is to regenerate the oil in order to preserve the protective layer of your floor.

Frequency : Monthly or bimonthly depending on usage

Product : **WOCA Oil refreshing soap** or **WOCA Oil refreshing soap white**

- Dilute the product in cold water at rate of 8.5 cl(2 caps) per 5 L.
- Whether you use a Spray Mop (cfr. Our accessories), mop or auto scrubber, always clean in the direction of the fibres.
- Do not leave water on the surface after cleaning. Dry well (no microfiber cloths).

### D. THOROUGH CLEANING

Frequency : as required

Product : **WOCA Master Cleaner**

- Dilute the product in lukewarm water at rate of à raison de 12,5cl (1/2 cup) for 5L.
- Clean the floor by letting the product act briefly to dissolve the dirt.
- Rinse with a wet mop and then with a well squeezed mop and let dry completely.
- After complete drying (8h) apply **WOCA Maintenance Oil** as for the initial treatment.
